Ok, so here we are the first beta release of SSHTunnel!

SSHTunnel is an OS X application that allows you to wrap the SSH commands for making tunnel between your computer and a remote one. It comes under licence GNU GPL v2. The source code is available at this url: http://code.google.com/p/cocoa-sshtunnel/.

This first version includes the following features:

- · Multi sessions auto saved :
- · Wrap SSH command to make tunnel:
- · SSH command monitoring;

On the next release, the following features will be included:

- Full keychain integration (Warning: on the current release, password are stored in clear);
- · Distant key SSH authentication configuration;
