SSHTunnel

samedi 21 juin 2008

What's up?
Well, i've not finish the keychain integration (haven't begin?), but i've fixed some bugs, optimizing the code and added cool Core Animation transitions and moves.
Oh, and i've added this fantastic dmg!

What's next?
• Adding multi server support ;
• Support of keychain ;
• Direct links to free shells ;
• Optimization / Debug ;
• Change old NStableView with a cool new NSOutlineView ;

And after the next?
• Adding Bonjour support for detecting other Mac over the network ;
• I'm sure i'll find other nice features ;

One more thing. I repeat : (**Warning: on the current release, password are stored in half clear mode**, means, if someone really wants, he might could read it).

vendredi 6 juin 2008

Ok, so here we are the first beta release of SSHTunnel!

SSHTunnel is an OS X application that allows you to wrap the SSH commands for making tunnel between your computer and a remote one.   It comes under GNU GPL v2. The source code is available at this url: http://code.google.com/p/cocoa-sshtunnel/.

This first version includes the following features :

• Multi sessions auto saved ;
• Wrap SSH command to make tunnel ;
• SSH command monitoring ;

On the next release, the following features will be included :

• Full keychain integration (**Warning: on the current release, password are stored in half clear mode**, means, if someone really wants, he might could read it) ;
