# SSHTunnel

vendredi 6 juin 2008

Ok, so here we are the first beta release of SSHTunnel!

SSHTunnel is an OS X application that allows you to wrap the SSH commands for making tunnel between your computer and a remote one.  It comes under licence GNU GPL v2. The source code is available at this url: http://code.google.com/p/cocoa-sshtunnel/.

This first version  includes the following features :

• Multi sessions auto saved ;
• Wrap SSH command to make tunnel ;
• SSH command monitoring ;

On the next release, the following features will be included :

• Full keychain integration (**Warning: on the current release, password are stored in clear**) ;
• Distant key SSH authentication configuration ;
